LOCAL COMPANY FOCUSED ON RECYCLING

By Recycling And Reusing Hazardous Waste

MINNEAPOLIS – Determan Fluid Solutions provides hazardous waste removal to the Midwest.

The Environmental Services Team, works together to remove hazardous waste from the environment by recycling petroleum based fuels that are no longer fit for use.

“Instead of getting sent off as waste they get used as products,” Jon LaFontsee CEO said.

Determan Fluid Solutions also recycles aboveground and underground storage tanks.

Scrap metal and unusable tanks are also recycled.

Determan Fluid Solutions is embarking on an energy efficient lighting program. This began with the instillation of high bay lighting in the warehouse. Now Determan Fluid Solutions has installed the energy efficient lights in the Shop Services Building and the Manufacturing Plant.

“The new fluorescent lights are brighter and use less energy,” said Michelle Dufner, Materials and Purchasing Manager.

In addition to recycling hazardous waste and the new lighting program all of the cardboard and paper at Determan Fluid Solutions is recycled.
